

Release Notes

Secure Access Manager

Version 6.5.0

Final Edition (February 24, 2025)

This edition applies to the current release of Secure Access Manager (SAM) and to all subsequent releases and modifications until otherwise indicated in new editions.

1 Enhancements and features

Item		Case ID
1	Bulk Action Tooling: Suspend, Unsuspend, Delete This addition to our existing Bulk Action Tooling series empowers Organization Administrators to perform bulk actions efficiently. Organization Administrators now have the ability to suspend, unsuspend, and delete user accounts in bulk. The tool features a robust search engine that enables administrators to filter and identify users based on specific profile criteria, facilitating targeted bulk actions. Please note that bulk actions cannot be executed on shared user accounts. This enhancement aims to provide administrators with a powerful yet precise tool for managing user accounts at scale within the existing Bulk Action Tooling series.	SAM-10648
2	Application Filter by Sponsor Shared users can now tailor their dashboard with a sponsor-based filter. This enhancement introduces a selectable button, allowing users to filter their applications by a specific sponsor or view all applications they have access to.	SAM-11716

2 Defects

Item	Description	Case ID
1	Bulk subscribe is not subscribing users to applications The Bulk Subscribe feature for Organization Administrators has been fixed. Users are now correctly subscribed to the selected application.	SAM-11533
